SUMMARY

Final-year B.Tech CSE (Cloud Computing) student at SRMIST (CGPA: 9.07) with strong software development skills and hands-on experience across the full SDLC – from requirements and design through development, testing, deployment, and documentation. Built production-grade applications using Python, FastAPI, Flask, SQL, Docker, and REST APIs, deployed on AWS cloud infrastructure. Experienced configuring and deploying ML/AI solutions with measurable outcomes, working independently with strong time management, and communicating technical findings clearly to both technical and non-technical stakeholders. AWS Certified Cloud Practitioner and Solutions Architect. First Prize winner at NWC Expo 2026.

EDUCATION

SRM IST – Kattankulathur <i>B.Tech, Computer Science and Engineering – Cloud Computing</i>	<i>Expected 2027</i> CGPA: 9.07/10
FIITJEE, Vijayawada <i>Class XII – BIEAP – MPC</i>	2023 Percentage: 90.6%
Sri Chaitanya High School, Vijayawada <i>Class X – Board of Secondary Education</i>	2021 Percentage: 100%

SKILLS

Languages:	Python, SQL, Bash/Shell Scripting, HTML/CSS
Frameworks & APIs:	FastAPI, Flask, REST API Design, Streamlit, LangChain, Modular & Microservice-style Architecture, React (familiar), Node (familiar)
Dev & Testing:	Unit Testing, Integration Testing, GitHub Actions (CI/CD), Docker, Git, Agile/SDLC Awareness, Technical Documentation
Cloud & Infra:	AWS (EC2, S3, RDS, ECS, EMR, SNS, SQS, CloudFormation) – Certified, Azure (DP-900), Nginx, Containerization, Environment Config Management
Data & Analytics:	Pandas, NumPy, SQL, Scikit-learn, XGBoost, Statistical Analysis, Explainable AI (SHAP), Streamlit Dashboards, Matplotlib, Seaborn
AI & ML:	TensorFlow, PyTorch, HuggingFace Transformers, ChromaDB, LLMs (LLaMA-3.3-70B), RAG Pipelines, NLP, Computer Vision

INTERNSHIP

Summer Research Internship – NWC, SRMIST Bidirectional Multi-Task Chest X-Ray Framework <i>PyTorch, ResNet-50, BiFPN, FiLM, FCOS, Flask, Python, Synthetic Data Generation</i>	<i>Summer 2025</i> <i>Deep Learning / Computer Vision</i>
- Designed and developed a novel joint deep learning application in PyTorch performing chest X-ray denoising and pathology localization simultaneously – built to functional requirements with measurable quality gates (mAP@0.5: 0.122, 4.2× over baseline) - Diagnosed and resolved three software defects (data normalization bug, scale misconfiguration, evaluation threshold error) via structured root cause analysis – demonstrating systematic problem-solving and debugging across the full application stack - Built and deployed a Flask client-facing demo application: end-to-end pipeline from image ingestion through inference to annotated output delivery – with technical documentation covering architecture, inputs, outputs, and known limitations	

PROJECTS (ALL AVAILABLE ON GITHUB)

Fraud Detection & Risk Scoring System <i>Python, SQL, Pandas, FastAPI, XGBoost, SHAP, SMOTE, Streamlit, Docker, Scikit-learn</i>	<i>Full-Stack Application / Data & Analytics</i>
- Developed an end-to-end application on 284K+ financial transaction records, owning the full SDLC: data ingestion →	

feature engineering → model development → REST API → dashboard → documentation – delivered independently with zero external guidance

- Built and deployed a production-ready REST API (FastAPI) serving real-time risk scores at 120ms latency; containerized with Docker for consistent deployment across environments; configured Nginx for load balancing supporting 500+ concurrent requests
- Applied SHAP explainability to translate model outputs into business-readable insights for non-technical customer stakeholders –
- Performed both unit and integration testing across pipeline components; authored technical documentation covering data flow, API contracts, model behavior, and operational runbook

NexGen Tutor AI – AI Learning Assistant

Full-Stack SaaS / AI Application Development
Python, LangChain, LLaMA-3.3-70B, HuggingFace, ChromaDB, Groq API, RAG, Streamlit, FastAPI

- Independently designed, developed, tested, and deployed a full-stack AI SaaS application with modular, microservice-style backend architecture – supporting multi-user concurrent workflows across 8 feature modules
- Configured and integrated multiple third-party components (Groq API, ChromaDB, HuggingFace sentence transformers, LangChain) into a cohesive, production-stable application – analogous to configuring and customizing core platform products at AVEVA
- Built automated quality assurance into the application pipeline: hallucination detection module (91% precision) as an integration-level quality gate; tracked system metrics (ROUGE-L F1: 0.74, hallucination rate: 6.7%) across 8 modules
- Managed own delivery timeline end-to-end; performed knowledge transfer via live demo and documented evaluation metrics; Won First Prize at NWC Expo 2026 (SRMIST)

CERTIFICATIONS

AWS Cloud Practitioner	<i>Feb 2026 – Feb 2029</i>
AWS Solutions Architect – Associate	<i>Feb 2026 – Feb 2029</i>
Azure Data Fundamentals (DP-900)	<i>Apr 2026</i>

AWARDS

First Prize – NWC Expo 2026	<i>Apr 2026 — SRMIST</i>
------------------------------------	--------------------------

- Recognized for independently developing and deploying NexGen Tutor – a production-stable full-stack AI application with documented evaluation metrics and multi-user delivery.

EXTRACURRICULAR

SOH – Souls of Humanity	<i>Volunteer</i>
--------------------------------	------------------

- Managed own time across multi-session programs; organized logistics, coordinated team members, and consistently delivered high-quality sessions under time constraints – reflecting AVEVA’s requirement for effective prioritization in fast-paced environments
- Communicated complex concepts clearly to diverse learners; developed strong interpersonal and customer-facing skills aligned with AVEVA’s customer service and professionalism standards
